

DesignStudio 1.5 Release Notes

These notes describe enhancements introduced in the DesignStudio 1.5 release scheduled for Tuesday, April 12, 2022. More information is available through the help in your solution or by contacting Juvare Support at 877-771-0911 or support@juvare.com.

DesignStudio

Board Detail View Slide Out

Now, you can access information in WebEOC boards faster and easier through a new detail view slide out that is available on all new boards created in DesignStudio. To implement this feature on boards created prior to DesignStudio 1.5, you must regenerate the board details and list views.

Board File Attachment Enhancement

When including a file attachment on a DesignStudio board, now you can indicate whether you want to use a form to collect the file. When enabled, DesignStudio automatically creates a field on the board to capture the attachment. If added to a display view, DesignStudio recognizes whether the file was submitted through a form or board, and it displays the appropriate link.

Resolutions

- An issue that delayed the creation of summary indicators has been resolved.
- The filter/search option was restored on boards available through the WebEOC mobile app.

DesignStudio Pro

Custom URLs and Domains for Serving Forms

Custom URLs and domains can now be used to serve forms created in DesignStudio. Customizing the address or source of your form offers a more cohesive experience for end users as they interact with your organization.

To use a custom URL, simply update the form details. To use a custom domain, create a sub-domain dedicated to DesignStudio Pro and contact your Client Services Manager (CSM) with this information.

Secure File Uploads Through Forms

For added control, files uploaded through a DesignStudio form are now only accessible for review and/or download from within WebEOC.
