

DesignStudio 1.8 Release Notes

These notes describe enhancements introduced in the DesignStudio 1.8 release scheduled for Wednesday January 4, 2023. More information is available through the help in your solution or by contacting Juvare Support at 877-771-0911 or support@juvare.com.

Offline Forms (DesignStudio Pro)

Forms can now be cached through your browser for use offline. On the form, click the download icon or on the Offline Forms page, select from the forms your administrator makes available. Then, complete the forms when appropriate, regardless of connectivity. If you are working offline, submitted forms are automatically uploaded when your device reconnects to a network.

Notes:

- Before you start using offline forms, it is important to clear your browser's history or cache to remove any previously saved forms.
- When working with offline forms, it may be helpful to enable Airplane Mode so that your forms are not partially uploaded when experiencing intermittent connectivity.

Form Publishing Enhancements (DesignStudio Pro)

Several enhancements to form publishing were completed, including:

- Added a connection validation through the form's Publish Profile.
- Converted the time zone and time format selection into lists.
- Converted the associated instance, board, and view selection into lists.
- Introduced plain language descriptions of publishing errors, along with the existing codes, to help you better understand and resolve any issues.
- Added automatic notifications about outdated forms, encouraging you to refresh the form for updates.
