

DesignStudio 1.1 Release Notes

These notes describe enhancements introduced in the DesignStudio 1.1 release scheduled for Tuesday, May 18, 2021. More information is available through the help in your solution or by contacting Juvare Support at 877-771-0911 or support@juvare.com.

Publishing Comments

When publishing a board, you can now add comments that describe the step, version, or other details. These comments are carried forward through each step of the publishing process, so you can reuse or edit the information along the way. These comments are also documented in the Publish History section for review.

Date/Time and Time Components

Date/Time and Time components were introduced on the Input View. These new components are optimized to work on any device, and they improve the user experience when adding date and time elements to boards.

Export Boards

Boards can now be exported in JSON format. Exported boards can be shared with others and easily imported back into DesignStudio.

Description on Details Page

On the Details page, the description field was enhanced to better handle adding and editing large bodies of text.

Resolutions

- Modified boards can now be copied after they have been edited and saved.
- On the Details View, the text on the Map button has been centered.
- When creating a Details View, help text entered on the input components no longer adds the word "Help" to the label.
- When the help text only contains an empty character, it is no longer rendered.
