# DesignStudio 1.4 Release Notes

These notes describe enhancements introduced in the DesignStudio 1.4 release scheduled for Wednesday, February 2, 2022. More information is available through the help in your solution or by contacting Juvare Support at 877-771-0911 or support@juvare.com.

Board Filter and Search

As a board builder, you can now include filter and search options on a board. Specified through the App Bar Settings, enabling these options allows you to define the button, filter and/or search type, and other features that users can interact with on the board. Being able to filter and search board content makes it easier to find and respond to relevant information.

Resolutions

- An issue that inadvertently allowed the 'fieldset' component to be positioned outside of the designated area was resolved.

- An issue on summary indicators, in which the title, subtitle, and icon were not displayed properly when a transparent background was in use, has been resolved.

- Minor issues related to editing and deleting organizations were resolved.

- On WebEOC board display views, an issue that caused the word "no" to display incorrectly has been resolved.

- In preview mode, an issue that prevented you from being able to scroll through forms was resolved.
