DesignStudio® 1.10 Release Notes

These notes describe enhancements introduced in the DesignStudio 1.10 release scheduled for Tuesday, October 3, 2023. More information is available through the help in your solution or by contacting Juvare Support at 877-771-0911 or support@juvare.com.

Responsive Dashboards

Dashboards are now fully responsive on mobile and tablet devices.

Child Input Views

DesignStudio now fully supports child tables with the following new additions:

Create Child Input Views

Users can now create child input views from the parent input view or directly from the Input Views area on the Explorer tab.

Child Table Component

A new Child Table board component allows you to view child records associated with a parent details view. This component is available on the associated parent details view.

View Link Component

A new View Link board component provides easier navigation between views for a board. Users can leverage this component to quickly add child records when viewing the child data on a parent display view. This component is available on input, list, and details views.

Board Permission Component

A new Board Permission component allows users to insert one or more components within a board permission tag. This component provides you with a toggle that provides two views:

- A view that includes components that appear if the user has permission.
- A view that includes components that appear if the user does not have permission.

This component is available on input, list, and details views.
