

EMResource® 4.12 Release Notes

These notes describe highlights of the EMResource 4.12 release scheduled for Wednesday, June 14, 2023. More information is available through the help in your solution or by contacting Juvare Support at 877-771-0911 or support@juvare.com.

Reactivate User

As a Regional Administrator or user with the appropriate rights, you can now reactivate user accounts in EMResource. Deactivated users cannot access the solution; however, their login email, views, roles, and rights are retained. As a result, reactivation is helpful when the user was only temporarily deactivated or for undoing a mistaken deactivation.

On the *Edit User* page, by selecting the **Active** checkbox, a user can be reactivated if:

- The login email is present on the user profile, and
- The user's login email is not associated with an active account.

Note: Login email addresses were removed for deactivated users in previous versions of EMResource; therefore, only users that were deactivated in EMResource 4.12 and later can be reactivated.

Enhancements on the *Setup Resources* Page

Several enhancements were applied to the *Setup Resources* page, helping you quickly view, create, and edit the resources and sub-resources to which you have rights. Some of these enhancements include:

- While viewing resources in a table, you can now navigate across pages by scrolling your mouse or using your keyboard's Home, End, Page Down, and Page Up keys.
- While viewing the details of an individual resource, you can now use the up and down navigation arrows to continue to the next one without returning to the main *Resources* page.
- On the *Sub-Resource List for (Resource)* page, the edit and delete buttons now appear on the left to streamline access to these features. A back button also appears on the left now.
