

EMTrack® 6.4 Release Notes

These notes describe highlights of the EMTrack 6.4 release scheduled for Wednesday, May 24, 2023. More information is available through the help in your solution or by contacting Juvare Support at 877-771-0911 or support@juvare.com.

Patient Import Tab

Administrators and users with the appropriate permissions can now upload patient records in bulk using an Excel® or comma-separated values (CSV) file. This feature is helpful in situations such as hospital evacuations and medical surge events, as well as when you need to process inbound patients from regions that do not use EMTrack.

On the *Import* tab, administrators can download the template to guide the creation of their patient import file or upload an Excel or CSV file containing the patient data and map it to the appropriate field names. With this release, additional documentation will be provided in the Help Center titled **Patient Import**.

App Switcher Update

When appropriate, you can access your organization's other Juvare solutions through the menu on the upper left by selecting **Other Juvare Solutions**. Juvare Login Services opens, with the *My Apps* page offering a dashboard display of tiled links to all your other Juvare solutions.
