

SSO Release Notes

These notes describe highlights of the SSO 1.4 release. Details on these and other features are available through your solution. For more information, please contact your Client Success Manager (CSM) or Juvare Support at 877-771-0911 or support@juvare.com.

Resolved Issues

Duplicate Account Creation in SSO

The standard SSO module would bypass the duplicate account restriction. This issue has been resolved, as username uniqueness (rules) is now enforced and prevents account duplication.

Incorrect URL Produced When Logging in Through SSO

When attempting to login via SSO, the system would produce an incorrect URL, preventing users from logging in successfully. This issue has been resolved.

Logout Notification Page Error

When logging out of WebEOC in SAML mode, the “You’ve Been Logged Out” page would not display. This issue has been resolved.

Password Requirements Not Bypassed

When creating a user account, the password requirement would prohibit authentication of SSO. This issue has been resolved.

Self-Registration Page Redirect Error

When attempting to self-register for a new WebEOC account, the self-registration page redirect would not load. This issue has been resolved.

Virtual Directory Redirects

When using virtual directories, the system would produce a redirect error. This issue has been resolved.

Updates

Redesigned WebEOC Logout Page

The WebEOC logout page has been updated to reflect Juvare's branding guidelines and to include a modern look and feel and user-friendly language.

Updated Login Page

A new feature that allows access denial to the standard login page has been added.
