

eICS® Interface 2.0 for Users

Overview

The *Electronic Incident Command System (eICS) Interface* is a software bridge that allows you to link to and view eICS incident information from WebEOC.

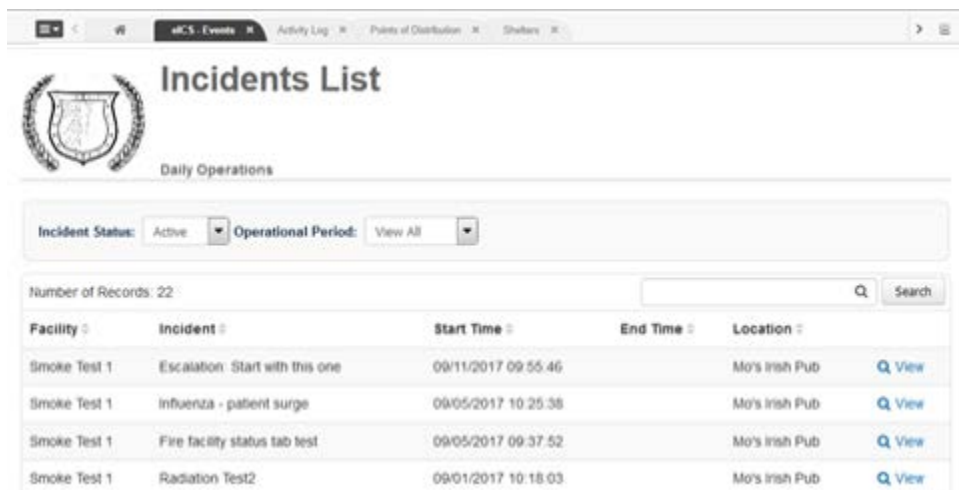

This solution comprises three board components—Events, Incidents, and Location. Each board displays eICS events, incidents, or locations that have been shared with WebEOC. You can filter lists and view details about each entity as appropriate.

Incidents List View

From the **Incidents List** view, you can view all eICS incidents that have been shared with WebEOC. You can filter the list by incident status or operational period (**Immediate**, **Intermediate**, **Extended**, and **Recovery**) and view details about each incident, such as **Start Time**, **End Time**, and **Location**.

To view all the record details, to the right of the applicable record, click **View**.

The Incidents List view, if assigned to you by an administrator, can be opened from the control panel by selecting the appropriate board name.

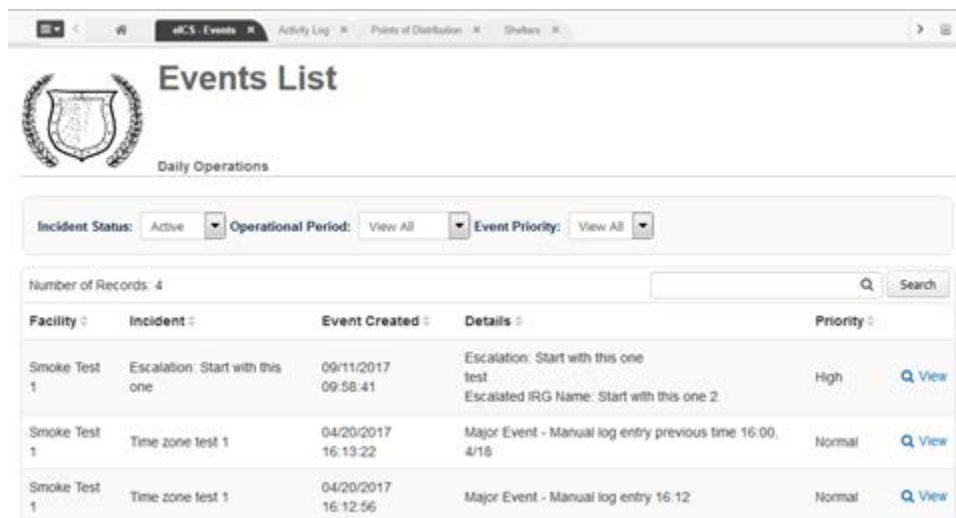

Facility	Incident	Start Time	End Time	Location	
Smoke Test 1	Escalation - Start with this one	09/11/2017 09:55:46		Mo's Irish Pub	View
Smoke Test 1	Influenza - patient surge	09/05/2017 10:25:38		Mo's Irish Pub	View
Smoke Test 1	Fire facility status tab test	09/05/2017 09:37:52		Mo's Irish Pub	View
Smoke Test 1	Radiation Test2	09/01/2017 10:18:03		Mo's Irish Pub	View

Event List View

The **Events List** view displays eICS events or activities occurring for each mapped incident. You can filter the list by incident status, operational period, or priority (**Low**, **Normal**, **High**) and view details about each event, such as **Facility**, **Details**, and **Priority**.

The Events List view, if assigned to you by an administrator, can be opened from the control panel by selecting the appropriate board name.

To view all the record details, to the right of the applicable record, click **View**.

Facility	Incident	Event Created	Details	Priority	
Smoke Test 1	Escalation: Start with this one	09/11/2017 09:58:41	Escalation: Start with this one test Escalated IRG Name: Start with this one 2	High	View
Smoke Test 1	Time zone test 1	04/20/2017 16:13:22	Major Event - Manual log entry previous time 16:00, 4/18	Normal	View
Smoke Test 1	Time zone test 1	04/20/2017 16:12:56	Major Event - Manual log entry 16:12	Normal	View

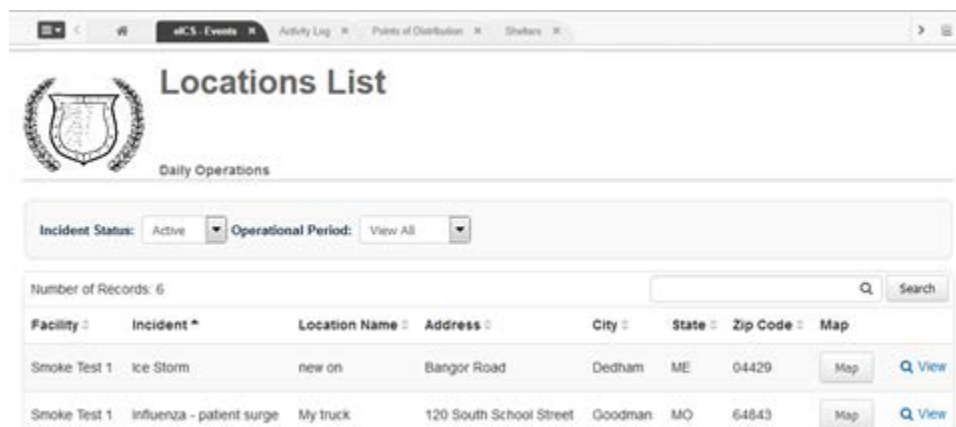

Locations List View

The **Locations List** view shows details for locations associated with mapped incidents. You can filter the list by incident status or operational period and view details about each location.

The Locations List view, if assigned to you by an administrator, can be opened from the control panel by selecting the appropriate board name.

To view all the record details, to the right of the applicable record, click **View**.

Additionally, a unique map feature allows you to view locations on a map using your *WebEOC Mapper Professional* or *Mapper Lite* add-on.

Facility	Incident	Location Name	Address	City	State	Zip Code	Map
Smoke Test 1	Ice Storm	new on	Bangor Road	Dedham	ME	04429	Map View
Smoke Test 1	Influenza - patient surge	My truck	120 South School Street	Goodman	MO	64843	Map View

Incident Mappings

If granted permissions by your administrator to map or unmap incidents, an **eICS** option is available within the *Plugins* section of the control panel. Click this link to go to the *Incident Mappings* page.

Note: The plugin might have been named differently by your WebEOC administrator when assigning it to you. Verify with your administrator which plugin name to click in the control panel.

From there, you can map or unmap incidents as appropriate.

1-15 of 251		Filter...	Filter	
<input type="checkbox"/>	eICS Incident ^	WebEOC Incident ⇅	Map	Unmap
<input type="checkbox"/>	Cape Coral Hospital - a Loss of Power	** Mobi Demo
